- 27- Distance to nearest mill or smelter, and treatment charge.
- 28- Cost of transportation to mill or smelter.
- 29- Daily wage for miners. Number of hours.
- 30- Nearest point for mining supplies.

Reply to these questions on a separate sheet, numbering each reply to correspond with the number of the question. Attach the replies to this sheet and return.

Mines are seldom bought on the representations of owners, but on a verification of those representations, consequently the importance of conservative representations.

Purchasers seldom incur the expense of examination until supplied with full, complete and detailed information, in writing, showing a reasonable presumption of profits on the price asked, which if verified usually results in a deal.

The real object of these questions is not so much to ascertain the name of a property, where located and by whom owned, as to learn if you have a proper of real merit, for sale, which will stand the test of a rigid examination, hence if you so desire you can omit replies to questions 1, 2 and 4.

PROSPECTS.

If your property is not a developed mine, but a right good prospect, reply to those questions only, as apply to your property.

REMARKS.

Conservative remarks upon other producing properties in the same district stating how near to your property, also on mining conditions will be helpful.
